Monday, November 3, 2025

- Pradeep:
  Merged pull requests integrating Backup-Restore and Expense Auto-fill Date features. Added robust data recovery and automation to expense workflow. All tests passing.
- Quan:
  Handle undefined routes with proper authentication, implement edit feature for group-based expenses, implement date autofill feature to expense forms, handle all merge conflicts, restore any missing functions from UI commit to get us to the final code product of the project.
- Amesh:
  NA

Sunday, November 2, 2025

- Quan:
  Merged main into feature branch, fixed routing, expense, and OAuth errors. Integrated AI and UI optimization PR after successful code review.
- Pradeep:
  Fixed merge conflicts and updated Gemfile for Linux CI platform support. Attention needed on test results—some failures noted.
- Amesh:
  NA

Saturday, November 1, 2025

- **Pradeep:**
  Focused on build files, dependency updates, code refactors, Tailwind CSS integration, and dashboard analytics with AI. Major code maintenance and UI improvements.
- **Quan:**
  Worked on authentication routing and redirects—core navigation updated and verified.
- **Amesh:**
  NA

Friday, October 31, 2025

- **Quan:**
  Updated backup-restore and integrated context-based messaging into main. All backup/restore functionalities passed validation.
- **Pradeep:**
  NA
- **Amesh:**
  NA

Wednesday, October 29, 2025

- **Amesh:**
  Increased RSpec coverage to 100%, restored Gmail OAuth, fixed tests and signup flow. Some tests need further fixing.
- **Quan:**
  Implement backup functionality, implement restore functionality, implement backup & restore user interface
- **Pradeep:**
  NA

Monday, October 27, 2025

- **Pradeep:**
  Merged expense dashboard features and addressed multiple test and formatting fixes. Implemented dashboard analytics, improved styling, and maintained dependency hygiene.
- **Quan:**
  Implement direct private messaging between two users regarding an expense, implement a conversation page that divides contactable users based on groups, implement multiple expense references in messages

NA

Sunday, October 26, 2025

- Quan:
Restored development config, cleaned up UI button error, and confirmed all tests passing.
- Pradeep:
NA
- Amesh:
NA

Thursday, October 24, 2025

- Pradeep:
Merged direct messaging feature into main—function tested and verified.
- Quan:
NA
- Amesh:
NA

Wednesday, October 23, 2025

- Quan:
Hardened secure messaging, expanded test coverage, user-to-user messaging and social features integrated.
- Amesh:
Added group comments, completed split-bill feature, all expense tests passed, and fixed visibility bugs. Achieved 100% RSpec and group expense test coverage.
- Pradeep:
NA

Tuesday, October 22, 2025

- Amesh:
Worked on create expense test suite—progress in validation and debugging.
- Quan:
continued bill ai recognition branch to see if it's possible within this project timeframe (it's not)

- Pradeep:
  NA

Tuesday, October 21, 2025

- Venkateswarlu:
  Series of pushes to fix root routes and update homepage with Expense Table link; handled platform compatibility and optimized deployment settings.
- Quan:
  Merged updates from main into forgot-password branch; resolved merge conflicts for feature alignment. completed login logout feature, initiated bill ai recognition branch
- Pradeep:
  Merged forgot-password feature branch; improved password reset workflow and security controls.
- Amesh:
  NA

Monday, October 20, 2025

- Quan: created Kanban board and Project 2 template on github, created 3 issues to be closed by his login-logout PR and branch, created traditional/Google login-logout features, pushed feature to github and created a PR
- Amesh: initiated his social feature branch
- Venkates: initiated his expense management branch
- Pradeep: Created Slack and confluence and added team members to it, discussed about the dashboard workflow and added the boilerplate code for the dashboard with all the user stories

---

Sunday, October 19, 2025

- Quan:
  Added comprehensive authentication test suite for robust user login handling. Implemented user authentication with Google OAuth via Devise for sign-in and improved security controls.
